

Project Description: Bright Coffee Shop Sales Analysis

This project focuses on analyzing transactional data from Bright Coffee Shop to generate meaningful business insights that support strategic decision-making. The dataset captures daily sales activities, providing a detailed view of product performance, customer purchasing patterns, and overall revenue trends for 6 months.

As part of this analysis, the objective is to assist the newly appointed CEO in understanding key drivers of business performance and identifying growth opportunities. By leveraging data analytics, SQL, and visualization techniques, the project aims to transform raw historical data into actionable insights.

The analysis will explore which products contribute the most to revenue, identify peak business hours, and uncover sales trends across different time intervals. Additionally, the project will evaluate overall store performance and provide data-driven recommendations to enhance sales, optimize operations, and improve profitability.

Ultimately this information will assist the CEO to make an informed decision.
